Early Notions of Family Engagement As Patient- and Family-Centered Care

Definitions for the Institute of Medicine's "Envisioning the National Health Care Quality Report" (2001):
Version 2 (expanded): Health care that establishes a working partnership with patients and their families to ensure decisions are made that respect and honor patients' wants, needs, and preferences and to ensure that patients have the education and support they need to act as a central resource in their own health and/or the health of their family.

Patient Centered Care Quality Measure Categories & Specific Measurement Concepts

(Bethell, 2000, "Patient-centered Care Measures for the National Health Care Quality Report")

1: Patient Centered Communication and Caring

- 1A: Communication with Health Care Providers
- 1B: Helpful and Respectful Support Staff

2: Patient Centered Education and Teamwork

- 2A: Shared Decision Making
- 2B: Getting Needed Information
- 2C: Self Care Management and Support
- 2D: Self Care Efficacy

3: Consumer Empowerment

- 3A: Consumer Activation
- 3B: Public Disclosure of Performance Information

4: Patient Centered Systems of Care

- 4A: Understanding Population Needs and Preferences
- 4B: Patient Centered Customer Service, Convenience, and Comfort
- 4C: Managing for Patient Centered Care
- 4D: Families as decision making partners in systems programs, policies and all initiatives to engage families

Transforming health care through partnerships

Home About Us Our Services Educational Programs Resources Profiles of Change PFCC Best Practices

Consulting/Technical Assistance

With IPFCC's technical assistance and resources, LIHN has implemented Patient and Family Advisory Councils at each member hospital. Through this partnership, we've identified numerous opportunities to expand the practice of patient- and family-centered care in the clinical setting.

— Kathleen Masiulis, MS, BS, RN, FACHE
Former Senior Vice President, Long Island Health Network

IPFCC provides on-site consulting and technical assistance for advancing the practice of patient- and family-centered care, from beginning steps to the most advanced stages. We tailor services to best meet your organization's priorities and needs. Services we offer include:

Organizational Assessment Site Visit. Conduct one-day or multiple-day site visits to assess policies, programs, facilities, and practices and provide debrief with recommendations for change and improvement.

Family Engagement Inventory

HOME ABOUT DEFINITIONS THEMES BENEFITS PRACTICE STRATEGIES PROGRAM STRATEGIES SYSTEM STRATEGIES RESOURCES

Definitions of Family Engagement

The definition domain includes statements, phrases, and/or quotations that explain the meaning of or provide a description of family engagement for each discipline referenced in the inventory. This section highlights a family engagement definition from research on the designated discipline.

Narrow by Discipline (5)

Child Welfare

Family engagement is a family-centered, strength-based approach to establishing and maintaining relationships with families and accomplishing change together. At the practice level, this includes setting goals, developing case plans, making joint decisions, and working with families to ensure their children's safety, permanency, and well-being. It encompasses the inclusion of children and youth (when age appropriate), as well as adult family members, in case planning and case activities, and also involves supporting the

Juvenile Justice

Within juvenile justice, family engagement occurs when the justice system respects family members as partners and facilitates their ongoing participation in decision-making regarding the youth's rehabilitation.

Family engagement: any role or activity that enables families to have direct and meaningful input into and influence on systems, policies, programs, or practices affecting services for children and families.

Person and Family Engagement

Person and Family Engagement

We're Putting Patients First

We need your help to bring patients and their families into the health care system to work on the design, delivery, and evaluation of their care. Our [Person and Family Engagement Strategic Plan](#) guides our work to put patients first by asking them and their families to work with us on our policies and programs.

What is the CMS Person & Family Engagement (PFE) strategy?

Our [PFE strategy](#) explains:

- The goals of person and family engagement.
- How we'll work with our partners and stakeholders to meet our goals.

What is our PFE strategic plan about?

Our strategic plan gives specific, actionable goals and objectives for making more people aware of and involved in person and family engagement.

How did we develop our PFE strategy?

Family Engagement at the AAP: History and Policy

Information about the AAP Family Partnerships Network, how to join, activities and the executive committee.

History

Family members have been engaged, often informally, in AAP initiatives over many, many years.

- Early initiatives included participation with the Committee for Children with Disabilities
- 1999: Family Voices Liaison named to Medical Home Initiatives for Children with Special Health Care Needs Project Advisory Committee
- 2007: Parent Advisory Group (PAG) established under the AAP Section on Home Care

Family Engagement & Leadership

Family Engagement in Title V Programs

How states sustain and diversify engagement to improve quality

Families play a critical role in helping to improve maternal and child health services provided through the federal Title V Maternal and Child Health Block Grant. AMCHP set out to measure and describe how programs funded by Title V work to sustain and diversify family and consumer engagement, which the block grant requires them to document.

In 2014 and 2015, AMCHP conducted a survey about family engagement policies and practices in Title V maternal and child health and children and youth with special health care needs programs, with funding from the Lucile Packard Foundation for Children's Health and the U.S. Maternal and Child Health Bureau. The findings provide a snapshot of strategies to support meaningful family engagement, effective and innovative practices, and areas of need for improvement and technical assistance.

Survey

The survey report — Sustaining and Diversifying Family Engagement in Title V MCH and CYSHCN Programs — is composed of a summary of the results and a series of briefs that detail the results in specific areas.

- Family Engagement Executive Summary
- Creating a Culture of Family Engagement
- Levels of Family Engagement
- Roles of Family Staff or Consultants
- Family Members Employed as Staff
- Sustaining and Diversifying Family Engagement
- Evaluating Family Engagement

Case Studies

The case study reports provide examples of engaging families and engaging diverse populations from a total of five states.

Various Definitions of Family Engagement

We define **patient and family engagement** as patients, families, their representatives, and health professionals **working in active partnership at various levels across the health care system**— direct care, organizational design and governance, and policy making—to improve health and health care.

Carman et al., 2013, *Health Affairs*

Family engagement is a **family-centered, strengths-based approach to establishing relationships** with families and sustaining the “work” to be accomplished together with them. On the practice level, this includes setting goals, developing plans, making decisions, and working with families to keep their children safe, provide them with a permanent home, and attend to their well-being. On an organizational or system level, it means including families as key stakeholders and advisors in policy development, service design, and evaluation.

McCarthy, 2012 (Child Welfare Practice Models guide)

Family engagement is the process in which families and youth have a **primary decision-making role** in the youth’s treatment. Families are involved in making decisions regarding providers involved in the treatment team, and are encouraged to express preferences, needs, priorities, and disagreements. In addition, families **actively collaborate** in treatment plan development and in identifying desired goals and outcomes. Families are provided with thorough information to guide their decision-making and make joint decisions with their treatment team. Families actively monitor treatment modifications and treatment outcomes.

American Academy of Child & Adolescent Psychiatry, 2009

Family engagement is an **innovative approach** to the planning, delivery, and evaluation of health care that is grounded in **mutually beneficial partnerships** among health care providers, patients, and families. Johnson et al., 2012, Institute for Patient- and Family-Centered Care

Assessing the Effects of Physician-Patient Interactions on the Outcomes of Chronic Disease

SHERRIE H. KAPLAN, PhD, MPH, SHELDON GREENFIELD, MD,
AND JOHN E. WARE, JR., PhD

Growing interest in the doctor-patient relationship focuses attention on the specific elements of that relationship that affect patients' health outcomes. Data are presented for four clinical trials conducted in varied practice settings among chronically ill patients differing markedly in sociodemographic characteristics. These trials demonstrated that "better health" measured physiologically (blood pressure or blood sugar), behaviorally (functional status), or

Almost every state-level Quality Rating and Improvement System (QRIS) in the country includes family engagement as an indicator of early childhood education quality. Yet, most QRIS measure family engagement using a uniform, narrow set of parent involvement activities at the center. We propose an alternative approach that emphasizes a range of direct services for parents, including: (1) parenting classes, (2) family support services, (3) social capital activities, and (4) human capital services. In our proposed rating systems, states would assess how well centers address the highest ranked needs of families and employ evidence-based practices across one or more of the center-selected direct parent service categories. We explore

Family Engagement: Multi-Dimensional, Dynamic, Relationally Dependent Process Foundational to All Positive Health Outcomes

Requires sensitivity to family culture, structures, resources, constraints, socio-cultural and developmental influences underlying the varied pathways to family engagement.

State-Led Evaluations of Family Engagement: The Maternal, Infant, and Early Childhood Home Visiting Program

Evaluation Brief
August 2017

The Maternal, Infant, and Early Childhood Home Visiting Program (MIECHV)¹ supports voluntary, evidence-based home visiting services for at-risk pregnant women and parents with young children up to kindergarten entry. MIECHV builds upon decades of research showing that home visits by a nurse, social worker, early childhood educator, or other trained professional improve the lives of children and families by preventing child maltreatment, supporting positive parenting, improving maternal and child health, and promoting child development and school readiness.

States, territories, and tribal entities receive funding through MIECHV and have the flexibility to select home visiting models that best meet their needs.

“However, engagement is challenging. Up to 40 percent of families invited to enroll in home visiting programs choose not to do so. 17 Research also indicates that families who do enroll may receive less than 80 percent of intended visits, and 25–50 percent may leave the program before completing it.

Family Engagement as an Outcome (vs. as an outcomes of family engagement)

Family engagement in home visiting is the commitment of caregivers and pregnant women to

- (1) initially enroll in home visiting services,
- (2) engage during home visits, and
- (3) complete the intended number of home visits across the intended length of program enrollment.

Address All Interdependent Aspects of Family Engagement

Common themes:

- Active partnership at all levels
- Family-centered approach
- Collaborative decision making
- Building relationships
- Planning, setting goals, delivering, and evaluating health care

Communication between families and providers to build trust

- Open and honest interactions
- Child- and family-centered care
- Building trust and relationships

Family involvement to share decision making and plans of care

- Participation in decision-making
- Joint treatment and goal planning
- Joint input on EMR/patient portal

Active collaboration with organizations and systems for results

- Youth and family advisory boards
- Partner in program design and care delivery
- Participation in policy/program evaluation

Engage to improve health and well-being

- Proactive health seeking and pursuit of well-being
- Capacity and will to heal, change and learn
- Health promoting behaviors
- Self-management of conditions

Family Engagement in the MCH Measure Compendium

(measures across 11 MCH programs/initiatives)

Access and Quality Measures by Sub-Category

Health Condition, Status, and Behavior Measures by Sub-Category

Social Determinants Measures by Sub-Category

Family Engagement in the MCH Measure Compendium

Access to and quality of health care services

Measure Topics (#)	Level of Engagement
Well Visit Utilization	- Engagement in HC - Engagement in own health
CAHPS surveys (6)	Engagement in HC
Young Adult Health Care Survey (1)	- Engagement in HC - Engagement in own health
Transition to adult health care (5)	- Engagement in HC - Engagement in own health
Shared decision making (1)	- Engagement in HC - Engagement in own health
Anticipatory guidance (6)	Engagement to promote health
Care coordination (2)	Engagement facilitator
Family-centered care (1)	Engagement with provider
Developmental concerns addressed by doctors (1)	- Engagement facilitator - Engagement in HC

Example Measurement gaps

- Engagement with organizations and systems
- Goal setting and shared plans of care
- Building trust and relationships
- Joint EMR input

Potential outcomes of family engagement in health care and health of child and family (etc.)

- Reductions in emergency care use
- Healthy and ready to learn
- Healthy family routines and habits
- Family resilience

Family Engagement in the NSCH* & NS-CSHCN** (2001 to 2011-12)

*NSCH: National Survey of Children's Health

**NS-CSHCN: National Survey of Children with Special Health Care Needs

Aspects of Family-Centered Care, 2001-2012

LARGE VARIATION: Across states, settings and by child and family needs. **Rates MUCH lower** for CSHCN and when English is not primary language

Family Engagement in the 2016-2017 combined NSCH

LARGE VARIATION: Across states, settings and by child and family needs.
Rates MUCH lower for CSHCN and when English is not primary language

Aspects of shared decision making among children age 0-17 years

Family Engagement in the 2016-2017 combined NSCH

LARGE VARIATION: Across states, settings and by child/youth and family needs.

Aspects of transition to adult health care and related items, among youth age 12-17 years

Family Engagement in the MCH Measure Compendium

Health status, well-being, and health conditions across the life course

MANY MEASUREMENT GAPS!

Measure Topics (#)	Level of Engagement
Sunscreen use (1)	• Engagement in own health
Smoking cessation (2)	• Engagement in own health
Substance use risk perception (3)	• Engagement in own health
Substance use disapproval (6)	• Engagement in own health
Seat belt use (4)	• Engagement in own health
Vision/hearing protection (3)	• Engagement in own health
Sufficient sleep (1)	• Engagement in own health
Physical activity (7)	• Engagement in own health
Infant safe sleep (3)	• Engagement in own health
Contraceptive use (12)	• Engagement in own health
Meaning/satisfaction in life (2)	• Aspect of positive health

Healthy and ready to learn
School engagement
Positive parenting

Family Engagement in the MCH Measure Compendium

Social determinants of health

Measure Topics (#)	Level of Engagement
Family, peer, and other adult connections (4)	- Engagement in own health - Aspect of positive health
Early language & literacy activities (2)	Engagement in own health
Sexual health discussion with parents (8)	Engagement in own health

Example Measurement gaps

- Family engagement in policy
- Safe, stable housing, food and transportation
- Neighborhood safety and support
- Family resilience
- Relational health and parent-child connection
- Reductions in Adverse Childhood Experiences
- Actions to heal ACEs and build resilience
- Follow through to obtain social support services related to housing, food, transportation, legal support, etc.

Family Engagement Measurement Gaps and Opportunities (from the MCH-MRN)

- Measures on a particular topic do not exist

Conceptual

- Measures exist, but are not applied across multiple population groups

Population-based

- Measures exist, but are not well used

Use

- Lack of alignment in measurement hinders shared accountability

Alignment

- Measures are not applied for action

Application

- Measures are not collected with demographic data, preventing analysis of disparities

Representative

- Measures are being used, but data is not analyzed or presented in a useful way

Translation

- Measure concepts exist, but have not been validated or don't have technical specifications

Specification/Validity

Family Engagement Technical Working Group

What are the short-term high priority actions and opportunities related to this topic?

1. **Clarify definitions** and meaning of family engagement and family centered care across different systems and context.
2. **Develop and model effective use** of measures, measurement tools, and information collected.
3. **Use available data well** (e.g., National Survey of Children's Health), EHR/EMR, and other sources.
4. **Enhance** measurement of family health and family engagement in **existing data collection platforms** (e.g., NSCH, Title V NOMs/NPMs).
5. **Synthesize existing knowledge** and create a “**launch and learn**” **evaluation** platform to learn “what works for whom”. Consider *Citizen Science* models, not just CoIINs.
6. Ensure **family leadership** in measure development and research on family engagement.

Family Engagement Technical Working Group

What are the potential next steps?

1. **Leverage existing cross-sector commitment** to Family Engagement to “go the distance”
2. **Strategically review, analyze and “make actionable” existing data** and research on family engagement and its measurement in clinical care and system initiatives. Don’t reinvent the wheel.
3. Through **Family Voices leadership**, complete development of the family engagement systems tool (FESAT) using best practice measurement development/testing frameworks.
4. **Disseminate completed FESAT tool** and toolkit to state Title V MCH Programs, state Medicaid agencies, hospitals, health systems, and families.
5. Embrace **measurement as intervention** –engaging families in measurement is a good in itself. Example is Well Visit Planner tool to support early childhood development.
6. Develop a **grant application** for research support (e.g., R40 MCH research program).
7. **Publish papers** on family engagement measurement (FESAT) and methods to engage families (WVP/emerging Family Foundation of Care Planner for CSHCN).
8. **Share existing resources** via Internet.

NOW IS THE TIME!
