

**Prioritizing possibilities for child and family health and resilience:  
An agenda to address adverse childhood and the relational roots of wellbeing in  
child health services**

**TECHNICAL APPENDIX**

Table of Contents

- I. Further detail on Agenda Setting Activities and Field Building Efforts
- II. Compendium of Models, Evidence Based Practices, Collaboration and Initiatives, Policies and Guidelines, and Training Programs

## Technical Appendix I: Agenda Methods and Field Building Activities:

Technical Appendix I provides further detail on methods used in the agenda setting process and a detailed list of all field-building activities undertaken from 2013-2017 to develop this national ACEs and Positive Health agenda for Child and Family Health Services.

### Introduction to a Summary of Agenda Setting Methods and Field Building Efforts

This Technical Appendix provides more in-depth details about the methods and field building efforts conducted through the development of a national agenda to address adverse childhood experiences and promote resilience and nurturing relationships in pediatrics. The agenda summarized in the paper was the product of a three-year field-building effort<sup>1</sup> (2014-2017) which, through a number of different mechanisms and activities, gathered input from a wide range of stakeholders including researchers, providers, health systems, policy and thought leaders, public health and communications agencies, community-based organizations, national and local initiatives, philanthropic organizations and families, encompassing all levels of government and both public and private sectors.

<http://www.academyhealth.org/about/programs/adverse-childhood-experiences-aces>)

### Further Details on Methods

The framework and logic model guiding the agenda setting process is summarized in Figure 1 of the full paper (*Building the Field to Address ACEs and Foster the Roots of Wellbeing*, Academic Pediatrics, 2017). Commensurate with the release of first-ever national and state population-based data on ACEs among US children and youth from the 2011-12 National Survey of Children's Health (NSCH), the Child and Adolescent Health Measurement Initiative (CAHMI) initiated a partnership with Academy Health to engage a national expert steering committee<sup>1</sup> to review findings from this data and assess the need and goals for engaging in a children's health services research and policy agenda setting process to prevent and ameliorate the impacts of ACEs in children, youth and families. This work sought to build on prior foundation building efforts, such as the 2012 American Academy of Pediatrics policy statement on early life adversity, the CDC's Essentials for Childhood initiative, the Robert Wood Johnson Foundation's National ACEs Summit (May 2013), and launch of the *ACEs Connection* online resource in 2012.<sup>2-4</sup> As summarized in Figure 1 below, our work directly engaged approximately 500 individuals and comprised approximately 79 distinct agenda setting and field building activities and processes across eight areas of activity:

- (1) In-person stakeholder discussion and design summits (4 meetings; n=136);
- (2) Online crowdsourcing of goals and priorities (4 rounds; 10 groups; n=250);
- (3) Literature, environmental, and measurement methods scan (5228 publications scanned, 300 in depth reviews, 200 website reviews; 40 key informant interviews);
- (4) Develop foundational research and data resources using the 2013 released 2011-12 National Survey of Children's Health (NSCH). (2 data briefs; 2 policy/white papers; 3 journal publications; 2 magazine/press articles; design of methods to create county/city level child and youth ACEs and resilience data)
- (5) In-person focus groups and roundtable listening forums (8 forums at national

research, policy and practice-community conferences; approximately 125 participants)  
(6) Commission research and policy papers and facilitate development of Academic Pediatrics special journal issue (this issue of Academic Pediatrics) and an August 2016 JAMA Pediatrics publication<sup>5</sup> and other publications.<sup>6-13</sup>

(7) Conduct education and engagement presentations and workshops (31 sessions between May 2013 and December 2016; approximately 3000 participants overall; feedback informed agenda)

(8) Engage in participatory action research partnerships to learn and build the field. Included the collaborative design, dissemination and evaluation of state, county and city ACEs and resilience data-in-action infographics for community-based efforts (<http://childhealthdata.org/docs/default-source/local-area-synthetic-estimates/adverse-childhood-experiences-among-baltimore-maryland-s-children.pdf?Status=Master>); facilitating inclusion of ACEs and protective factors data into national chartbooks (<http://www.americashealthrankings.org/learn/reports/2016-annual-report>), news publications and policy forums related to collaboration across juvenile justice, social services, school health and health care reform.

Further information on the in person summits, online crowdsourcing and literature and environmental scan is summarized below. Additional detail and links to summaries and resources developed through each activity is available in the Field Building Summary Table, also included below in this Technical Appendix.

(1) In-person stakeholder discussion and design meetings (4 meetings; n=136):

Between Spring 2013 and Spring 2016, four in-person meetings were collaboratively designed with child health stakeholders to gather input on the state of the field, identify goals and partners to specify a national agenda, foster ongoing dialogue and cohesion among stakeholders to advance the capacity of the field to address ACEs and promote positive health. Deliberations were synthesized and guided development of commissioned research papers, action research field building efforts and the national agenda. Meetings included: (1) Pediatric Academic Societies Annual Meeting workshop on “Leveraging Mind-Body Neuroscience to Improve Pediatrics and Address Adverse Childhood Experiences” (May 2013; n=15); (2) an Academy Health Annual Meeting special interest group (SIG) meeting on “Promoting Early and Lifelong Health: The Problem of ACEs and the Promise of Resilience: (June 2014; n=36); (3) a San Diego County community forum “We Are the Medicine: How Communities and the Health Care System Can Work to Address Childhood Trauma and Promote Resilience” (June 2014; n=50) and (4) a national summit synthesizing the emerging “Hope and the New Science of Thriving” positive health-oriented agenda that emerged through this work (March 2016; n=35). Links to the agendas, participants and proceedings from these meetings can be found in the Technical Appendix.

(2) Online crowdsourcing of goals and priorities (4 rounds; 10 stakeholder groups; n=250);

A crowdsourcing software system called *Co-Digital* (<http://www.codigital.com/>) was used to engage a wide range of children’s health services stakeholders and partners to collectively generate, prioritize and refine goals and priorities for research and policy to address ACEs and promote child, youth and family resilience and well-being. From April 2014 to October 2015 three phases and four rounds of crowdsourcing took place. Each online input project lasted 7-10 days. A total of 814 individuals across 10 stakeholder groups were iteratively and collectively identified by steering committee members for participation including health

services researchers; pediatricians and pediatric nurses; state health policy and program leaders; children's hospital leaders; health care plan and system leaders; family leaders; federal policy and program leaders; social and community services organizations; media and public health communications leaders; funding agencies and foundations. Participants were organized into 26 smaller groups, each of which identified, refined and voted on each other's ideas for goals and priorities. Ideas identified in earlier rounds were set forth to subsequent groups for consideration and these subsequent groups further edited and ranked these ideas and added additional ideas. In this way, the crowdsourcing process operated as a modified Delphi process.

A total of 250 invitations were accepted, yielding an average 39% response rate across the 26 smaller groups. Response rates were as high as 84% for family leaders and 73.4% for state policy and program leaders to a low of 18.2% for federal agency and program leaders. About half (49%) of all respondents were health services researchers and pediatric providers with the remaining responses from the other 8 stakeholder groups. A total of 363 ideas were identified and ranked by importance by participants with an average of 2.45 ideas being set forth per participant and an average of 6.8 exchanges took place per idea to edit/refine and rank/vote on its priority. Table 1 in the full paper summarizes participation across each of the four rounds.

All ideas set forth across the four rounds of crowdsourcing were reviewed, regardless of their priority ranking by participants. Two phases of synthesis took place. First, ideas were categorized according to whether they referenced: (1) statements of importance of and priority goals for an agenda; (2) priority research, policy or practice implementation opportunities and actions that should be taken to achieve goals or (3) requirements to enable actions to advance goals and priorities. Once themes and ideas were identified, they were then categorized according to presence or absence of disagreement or uncertainty in order to identify priority issues for resolution to advance research, policy and practice action in the field. Synthesis from the crowdsourcing process was iteratively integrated with findings from other agenda-setting activities.

### (3) Literature and environmental scan

In person summits and crowdsourcing rounds led to the identification of research and resources and informed specification of guiding principles, search terms and a search plan for the literature review and environmental scan. The review and scan sought to identify frameworks and conceptual models, interventions, metrics and research relevant to assessing and addressing ACEs overall and bridging children's health services and other sectors to promote resilience, flourishing and positive child and family social and emotional capabilities.

Overall, 5228 publications and resources emerged from the search and led to an in-depth review of 300 pediatrics and child health research publications and reports. A total of 300 of these were categorized by type of research and led to identification of 25 conceptual models, 72 evidence-based interventions, 85 implementation programs, 80 multi-stakeholder collaborations and initiatives, 32 policies, guidelines and recommendation sets, and six training programs. Key informant interviews associated with publications and resources identified were conducted with over 40 resource leaders and 200 websites were reviewed to further evaluate resources identified. The findings from this activity are detailed in Technical Appendix.

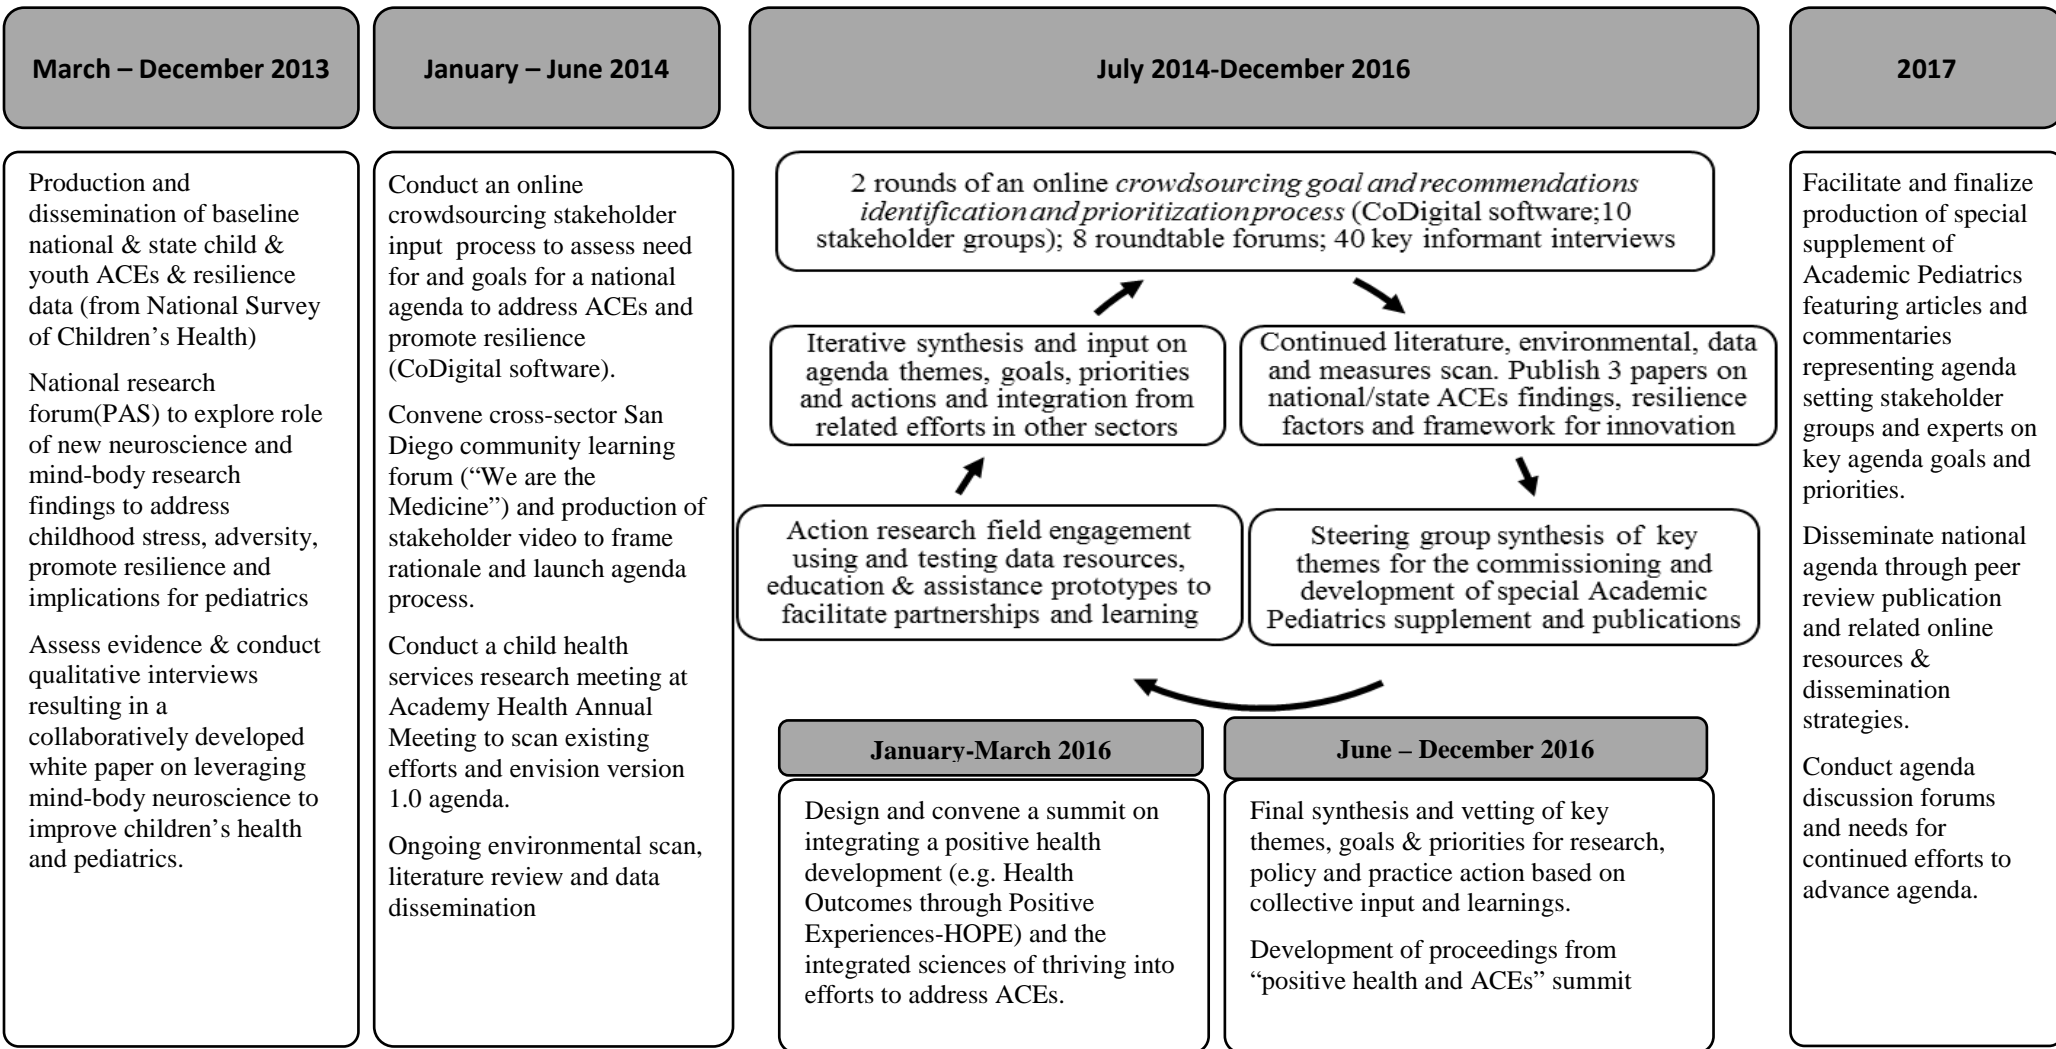

Assessment of the research and resources identified were evaluated for implications for research and policy priorities. This led to 47 ideas for consideration cutting across three broad areas: (1) research and data; (2) communication and translation; and (3) policy. These ideas were further evaluated for their potential to address shorter term needs and their readiness for

application in applied research and policy as well as their alignment with the priority goals and recommendations emerging from the crowdsourcing and other input processes. Input received through the in person summits and forums/listening sessions, key informant interviews, educational forums and action research efforts were further integrated with crowdsourcing results and those from the literature review and environmental and measurement scan.

## TECHNICAL APPENDIX II

### **Compendium of Models, Evidence Based Practices, Programs, Collaborations and Initiatives, Policies and Guidelines, and Training Programs**

Technical Appendix III provides a summary of the literature review and environmental scan conducted as part of the agenda-setting process with the intention to identify frameworks and conceptual models, evidence-based and other promising interventions and programs, federal, state and local collaborations and initiatives, policies and guidelines, and training programs. Overall, 5228 publications and resources emerged from the search and led to an in-depth review of 300 pediatrics and child health research publications and resources. A total of 292 of these were categorized by type of research and led to identification of 24 conceptual models, 72 evidence-based interventions, 85 implementation programs, 80 multi-stakeholder collaborations and initiatives, 32 policies, guidelines & recommendation sets and 6 training programs.
